

EstateTap

One-tap investing in tokenized real estate, as easy as a mobile banking app

The Problem & Our Solution

Real estate investing and crypto onboarding are both too complex, keeping everyday investors out of RWA opportunities.

- Buying property shares usually requires wallets, seed phrases, and crypto know-how
- EstateTap replaces seed phrases with simple email or social login
- One-tap purchase of fractional property tokens using fiat or USDC
- Rent income is auto-distributed to holders' wallets via Solana Pay
- A simple dashboard shows ownership percentage and yield in real time

How It Works

From sign-up to rent payout, EstateTap handles wallets, payments, and on-chain settlement behind a simple mobile-first flow.

- User signs up with email or social login, an embedded Solana wallet is created automatically
- User funds the account with fiat or USDC and taps once to buy fractional property tokens
- Property shares are represented as SPL tokens issued via Anchor programs on Solana
- Rent proceeds are distributed to token holders' wallets automatically via Solana Pay
- Helius RPC powers fast dashboard reads for ownership and yield history

Built with

Solana, Solana, Anchor, SPL Token, Solana Pay, Privy/Web3Auth embedded wallets, Next.js

Why Now & What's Next

Solana's low fees and new embedded-wallet tooling finally make consumer-grade RWA apps possible without crypto UX friction.

- Embedded wallets and fiat on-ramps remove the biggest barrier to crypto-native investing
- Solana's speed and low fees make microtransactions like rent splits practical
- Next: partner with a licensed SPV or tokenization provider for legal compliance
- Next: add a secondary marketplace for reselling fractional property shares
- Next: expand to multiple property types and geographies
